

AI Implementation Document for Aqora Forms - Mansha

1. AI Architecture, Connections & Routes

Core AI Layer

- Central AI service
- Handles:
 - Prompt processing
 - Context management
 - Response formatting

Routes / Endpoints

- **/generate-form**
 - Input: title, intent, category
 - Output: full form structure
- **/suggest-question**
 - Input: current form schema
 - Output: next best question
- **/refine-question**
 - Input: raw question
 - Output: improved version
- **/interview-flow**
 - Input: title + previous answers
 - Output: next adaptive question
- **/research-enhance**
 - Input: topic or document
 - Output: structured research content

Frontend Integration Points

- Form Builder (main AI usage)
 - Edit Mode (AI suggestions)
 - Interview Mode (dynamic flow)
 - Research Mode (content generation)
-

2. Prompt Engineering (Refinement Layer)

Base Prompt Structure

Rules:

- Avoid ambiguity
- Keep questions proper
- Ensure logical flow
- Optimise for response clarity

Examples

Form Generation Prompt

Generate a professional form based on:

Title: {title}

Purpose: {purpose}

Include:

- Logical ordering
- Required fields
- Best question types

Question Suggestion Prompt

Based on the current form:

{form_schema}

Suggest the next most relevant question.

Avoid repetition.

Focus on improving data quality.

Refinement Prompt

Improve this question:

"{question}"

Make it:

- More clear

- More engaging
 - More precise
-

3. AI Question Generator in Builder (Edit Mode)

Feature: “ Suggest Next Question” Button

Flow:

1. User builds form manually
2. Clicks AI button
3. AI analyses:
 - Existing questions
 - Form intent
4. Suggests:
 - Next logical question
 - Alternative phrasing
 - Missing important fields

Advanced Upgrade:

- Show **3 suggestions instead of 1**
 - Add “Why this question?” explanation
 - Let user regenerate
-

4. AI Interview Mode (Typeform-style but Better)

Feature: “AI Interview Form”

Flow:

1. User enters title:
 - Example: "Frontend Developer Interview"
2. System auto-generates:
 - Name
 - Email
 - Primary skill (derived from title)
3. Then dynamic questioning starts:
 - Based on previous answers

- Context-aware
- Progressive difficulty

Example Flow

- Q1: Name
- Q2: Email
- Q3: Primary Skill (auto-detected)
- Q4+: Adaptive questions

AI Prompt

You are an interviewer.

Based on the candidate's previous answer:

{answer}

Ask the next relevant question.

Keep it natural and conversational.

UI Style

- Chat / Notebook style
 - One question at a time
 - Smooth transitions
-

5. Research Mode (Needs Serious Upgrade)

Feature: “AI Research Form Generator”

User Input

- Topic
- Target audience
- Research goal

AI Output

- Structured sections
- Question categories
- Data-focused questions

UI Improvements

- Section-based form
- Tags (Demographics, Opinions, Behavior)
- Smart grouping

Advanced Features

- Auto insights preview
- Suggested analytics
- Export-ready format

Prompt Example

Generate a research-focused form:

Topic: {topic}

Audience: {audience}

Include:

- Demographic questions
 - Behavioral insights
 - Opinion-based questions
-

6. Additional Features:

A. AI Form Optimisation

- Improve the entire form in one click
 - Remove redundant questions
 - Reorder flow
-

B. AI Answer Analysis

- Summarize responses
 - Detect patterns
 - Highlight key insights
-

C. AI Auto Categorisation

- Group questions automatically
 - Suggest sections
-

D. Smart Validation

- AI suggests better input validation
 - Example:
 - Email format
 - Required fields
-

E. Tone Control

- Formal / Casual / Friendly forms
 - Changes the wording style
-

F. Multilingual AI

- Auto translate forms
- Localize tone
